What can I expect while I take this medication?

AirDuo RespiClick is an inhaled corticosteroid and long-acting beta-2 agonist. It decreases airway swelling and opens small airways. AirDuo RespiClick will not provide immediate relief, but you can expect fewer episodes of coughing and
wheezing.

**When to replace your AirDuo RespiClick:**

1. The counter on the back of your inhaler shows how many doses you have left.
2. When there are 20 doses left, the dose counter color will change to red, and you should refill your prescription.
3. When the counter displays 0, your AirDuo RespiClick is empty, and you should stop using the inhaler and throw it away.

**How to use your AirDuo RespiClick:**

1. Make sure the yellow AirDuo RespiClick cap is closed before you begin using your inhaler.
2. Hold the inhaler upright and open the yellow AirDuo RespiClick cap fully. When you open the cap, a dose of AirDuo RespiClick will be activated for delivery of the medicine.
3. You will hear a “click” sound when the cap is opened fully. If you do not hear the “click” sound the inhaler may not be activated to give you a dose of medicine.
4. Breathe out fully (in preparation to breathe in medication). Do not exhale into the inhaler mouthpiece.
5. Put the mouthpiece in your mouth and close your lips around it. Do not block the mouthpiece with your teeth or tongue. Do not block the vent above the mouthpiece with your lips or fingers.
6. Breath in quickly and deeply through your mouth.
7. Remove the inhaler from your mouth.
8. Hold your breath for 10 seconds or as long as you comfortably can, and then breathe out.
9. Always close the cap after each inhalation so your inhaler will be ready for you to take the next dose. Do not open the cap unless you are ready for
your next dose.

10. Rinse mouth thoroughly with water after taking medication to decrease the risk of a mouth infection. Spit out the water. Do not swallow it.

**How to clean your AirDuo RespiClick:**

Routine maintenance is not required. Do not wash or put any part of your inhaler in water. Do not take the device apart.

1. If mouthpiece needs cleaning, gently wipe mouthpiece with a dry tissue or cloth.

**Do not use AirDuo RespiClick with a spacer.**

**Do not use AirDuo RespiClick to treat sudden symptoms of your health condition. Always carry a rescue inhaler with you.**
