How to Use Your Flovent ® HFA (fluticasone)

What can I expect while I take this medication?

Flovent® HFA is an inhaled corticosteroid and long-acting beta-2 agonist. It decreases airway swelling and opens small airways. Flovent®HFA will not provide immediate relief, but you can expect fewer episodes of coughing and wheezing.

How and when to prime your Flovent® HFA:

- Prime inhaler if new, has not been used in 7 weeks, or if you drop it.
- Remove cap, shake inhaler for 5 seconds, and spray it once away from you; repeat for a total of 3 sprays.

How to use your Flovent ® HFA:

1. Remove Flovent®HFA cap. Place middle or index finger on top of canister and thumb underneath the mouthpiece of the inhaler.

COPD QI Steering Committee
2. Shake inhaler for 5-10 seconds.

4. Put the mouthpiece in your mouth and close your lips around it.

5. Push the top of the canister all the way down while breathe in deeply and slowly through your mouth.

6. Press canister one time to release medication and continue to breathe in slowly until lungs are full (do not breathe out).

7. Hold your breath for 5-10 seconds, and then breathe out.

8. If your physician has prescribed more than one dose (puff), wait 30 seconds and repeat above.

9. Rinse mouth thoroughly with water after taking medication to decrease the risk of a mouth infection. Spit out the water. Do not swallow it.

**How to clean your Flovent® HFA:**

Clean 1 time per week after your evening dose to prevent medicine from building up and blocking the spray

1. Remove the cap.

2. Use a clean, dry swab to clean the small circular opening where the medicine sprays out of the canister.

3. Wipe the inside of the mouthpiece with a clean tissue dampened with water.

4. Let dry overnight.

5. Put the cap back over the mouthpiece after it has dried.

**How to use a Spacer:** (If recommended for use with your inhaler)

1. Remove mouthpiece cap from your inhaler and shake inhaler for 5-10 seconds.

2. Attach inhaler to spacer and then remove mouthpiece cap from spacer.

3. Hold spacer with the inhaler canister upright.

5. Tilt head back slightly and put spacer to mouth and close lips around the mouthpiece (tongue and teeth should not block the mouthpiece opening).
6. Release medicine into spacer; squeeze down canister one time.
7. Breathe the medication slowly and steadily. Continue to breathe in deeply until lungs are full (do not breathe out).
8. Hold your breath for 5-10 seconds, and then breathe out. (Repeat as directed)

Do not use Flovent® HFA to treat sudden symptoms of your health condition. Always carry a rescue inhaler with you.
