

Get The Pressure Off Your Foot Ulcer With Offloading Devices

8 out of 10 amputations in people with diabetes are caused by a foot ulcer. A foot ulcer is an open sore or wound. It occurs in about 15 out of 100 people with diabetes so it is quite a common condition. **The best way** to prevent a foot ulcer from reaching the point it requires amputation is to relieve the pressure your body weight places on the foot with special footwear and/or an assistive device. Work with your doctor to get the right footwear and assistive device to heal your ulcer today!

This table shows how effective different footwear and devices are in relieving pressure off the feet.
