

Cosopt® is a combination of two medications, timolol and dorzolamide. Both of these medications help to decrease the production of the fluid inside the eye. The fluid inside the eye is called the aqueous humor. Timolol is a beta blocker. This is a type of medication that is used for high blood pressure or heart disease if it is taken by mouth. If you are already taking a beta-blocker or if you have asthma, let your doctor know as timolol may not be the best medication for you. Cosopt® has a dark blue top. Cosopt® is available in generic.
