Liposuction

Post-Operative Instructions

What are my post-operative instructions?

- Have someone drive you home after surgery and help you at home for 1-2 days.
- Get plenty of rest.
- Follow balanced diet.
- Decreased activity may promote constipation, so you may want to add more raw fruit to your diet, and be sure to increase fluid intake.
- Take pain medication as prescribed. Do not take aspirin or any products containing aspirin unless approved by your surgeon.
- Do not drink alcohol when taking pain medications.
- Even when not taking pain medications, no alcohol for 3 weeks as it causes fluid retention.
- If you are taking vitamins with iron, resume these as tolerated.
- Do not smoke, as smoking delays healing and increases the risk of complications.
- You need to purchase your compression garment and bring it with you to the hospital the day of surgery

What should my activity level be?

- You may shower 48 hours after surgery
- Start walking as soon as possible, this helps to reduce swelling and lowers the chance of blood clots.
- Do not drive until you are no longer taking any pain medications (narcotics).
- Discuss your time off from work with your surgeon; this varies according to surgery.
• Activities involving the affected sites should be minimized for approximately 2 weeks.
• Strenuous exercise and activities such as sports should be avoided for 3-4 weeks, depending on the extent of the surgery.

**How do I take care of my incision?**

• Avoid exposing scars to sun for at least 12 months.
• Always use a strong sunblock, if sun exposure is unavoidable (SPF 30 or greater).
• Keep steri-strips on.
• Keep incisions clean and inspect daily for signs of infection.
• No tub soaking while sutures or drains are in place.
• You will be discharged wearing a pressure garment over the treated area. Most patients will wear pressure garment for 6-8 weeks.
• Wear pressure garment 24 hours per day for 6 weeks.
• After showering, reapply pressure garment and gauze to cover areas of incisions.

**What can I expect to feel?**

• The small incision sites will be covered with gauze to protect these areas.
• Most of the swelling and discoloration usually subsides in 6-8 weeks, but some may persist for 6 months or more.
• Expect temporary numbness, bruising, swelling, soreness, burning sensation, bleeding, pain and discomfort.
• May have fluid drainage from incision sites.
• A drainage tube may be inserted beneath the skin to prevent fluid buildup.
• May feel stiff and sore for a few days.
• It is normal to feel a bit anxious or depressed in the days or weeks following surgery; but, generally, after about a week, you should begin to feel better.
• Bruising may be apparent beyond the areas of liposuction, partially due to gravity.
• You will have small incision sites at the point of introduction of the instrument used to remove the fat tissue.
• A healthy diet and regular exercise helps to maintain your new figure.

What follow-up care will I receive?
• Any sutures are removed 7-10 days after surgery.

When should I call my doctor?
• If you have increased swelling or bruising.
• If swelling and redness persist after a few days.
• If you have increased redness along the incision.
• If you have severe or increased pain not relieved by medication.
• If you have any side effects to medications; such as, rash, nausea, headache, vomiting.
• If you have an oral temperature over 100.4 degrees.
• If you have any yellowish or greenish drainage from the incisions or notice a foul odor.
• If you have bleeding from the incisions that is difficult to control with light pressure.
• If you have loss of feeling or motion.

Who should I call if I have questions?
• (734) 998-6022, Monday - Friday, 8 a.m. - 4:30 p.m.
• After hours and on weekends, call Hospital Paging at (734) 936-6267 and ask for the Plastic Surgeon on call
