

## What is a Dermagraft?

A **Dermagraft** is tissue that is put on your ulcer to help it heal. It is made out of human cells from donated newborn foreskin. The tissue is tested for viruses, tumors, blood disorders and abnormal cells. It is packaged under sterile conditions and received frozen. The package contains one piece approximately 2 inches by 3 inches in size for a single application.

## Who can use Dermagraft?

- People with full thickness diabetic foot ulcers.
- People with adequate blood supply to the involved foot.

## Who cannot use Dermagraft?

- People with infected ulcers.
- People with ulcers with sinus tracts.
- People with ulcers containing visible structure such as tendon, muscle, bone or joint.
