

Tell your doctor if you are pregnant or breastfeeding.

You have scheduled a Bone study. This study uses a small amount of radioactive material. The level of radioactivity used is extremely low and has no side effects.

You will be positioned on an imaging table under a special detector called a gamma camera. The camera does not produce any radiation. It will be placed close to the part of your body being imaged.

What will happen during my study?

This is a 2 part study.

Part 1: We will inject a small amount of radioactive material into a vein in your arm.

Part 2 (3-4 hours later):

We will take images for about 1 hour. We will position you on an imaging table, under a special detector called a gamma camera. The camera will be close to the part of your body being imaged. The camera does not produce any radiation .and will not cause any pain or discomfort.
