

PET Cardiac Sarcoid Testing FDG only

What is a PET Cardiac Sarcoid Test FDG only?

PET Cardiac Sarcoid Test takes a picture of your heart. This is done to find if any heart muscle has abnormal clusters of white blood cells, which effect heart function.

How do I prepare for PET Cardiac Sarcoid Test FDG only?

Several days before the test:

- If you know that are not able to lie on your back in a PET scanner up to 30 minutes at a time with your arms above your head, you will need to contact the Nuclear Cardiology scheduling desk beforehand at (734) 232-3231.
- If you need pain medicine or a mild sedative for claustrophobia in order to lay in the scanner, please contact the doctor who ordered this test or your primary doctor for a prescription. You also must arrange for a driver to take you home when your test is completed as you will not be able to drive after taking a sedative.
- If you are allergic to Heparin please call the scheduling desk at (734) 232-3231.

Sarcoid Test Meal Plan

- You must follow the Sarcoid Test Meal in preparation for this test, a No Carbohydrate/High Fat diet. Instructions are included. If you do not understand the Sarcoid Test Meal plan, please call (734) 232-3231 and ask to speak with an exercise physiologist. If you do not follow the Sarcoid Test Meal, No Carbohydrate diet, your test will be cancelled.

The day before the test:

- Follow the **No Carbohydrate** diet the entire day before your test. Instructions are included. Please follow this diet carefully to prevent rescheduling of the second part of this test and call if you have any questions.
- At the end of your study, you will receive a boxed lunch with either a ham or turkey sandwich. If this food does not fit your dietary constraints, please plan to bring lunch with you. You will not be able to go to the cafeteria to buy lunch. You will need to eat a lunch before being discharged.
- Avoid heavy lifting and strenuous exercise or activity.

Medications:

- If you take a medication called pentoxifylline, (Trental® and Pentoxil® or other names) do not take any the day before your test or the morning of your test.

The day of the test:

- Do not eat any food at least 8 hours before your test. You may only drink plain water.
- If you shower the morning of your test do not use oils or lotions on your chest or stomach so you can be easily attached to a cardiac monitor.
- Bring a list of the medications you take. Bring any medications you may need to take throughout the day.
- Take only necessary medications the morning of the test. Do not take any medication that is listed in these instructions for you to hold. Do not take Metformin (Glucophage®).
- Wear comfortable clothes with a loose fitting shirt and comfortable walking shoes such as sneakers. Do not wear metal jewelry. Layered clothing is best as some hospital rooms can be chilly.
- **Park in Parking Structure P1 or P2.**

- Check in at the Nuclear Medicine reception desk in University Hospital on **Level B1, Reception C**, 30 minutes before your appointment time.
- Plan on being at the hospital for 6-8 hours as there will be wait times between different parts of the test. You may bring a book to read or something to help pass the time.

What happens during the test?

1. An IV will be placed in a vein to collect several blood samples
2. You will be given a shake to drink (almond milk with vegetable oil) and we tell you what time to return to UH B1 Reception C for the test. You will not be able to eat or drink anything but the shake and water during this 3-4 hour time period.
3. Once you return, more blood will be drawn from your IV and you will receive injections of heparin and a radioactive form of sugar called fluorine-18 fluorodeoxyglucose or F-18 FDG. There will be a wait time of approximately an hour before more scanning is done so that the F-18 FDG can move through your body.
4. After your scan is done you will receive a box lunch to eat. You can eat your lunch if you brought your own food.
5. You will be discharged about an hour after the scan, when you are done eating, and when your blood glucose level is within normal range.

How do I get results of the test?

The Nuclear Cardiology Radiologists will review your test images before you leave to make sure the images are satisfactory. The results of the test will be sent to the doctor who ordered the test in 2-3 days, they will give you the results.

Who do I call if I have questions?

If you have any questions, please call the Michigan Medicine Nuclear Cardiology Department at (734) 232-3231 between the hours of 7:30am and 5pm Monday through Friday and ask to speak with an exercise physiologist.
