

GUIDELINE FOR TREATMENT OF BACTERIAL MENINGITIS IN ADULTS

Patient Population & Common Pathogens	Empiric Treatment Regimen	Duration of Therapy	Comments & Reference
Age >18 <i>N. meningitidis</i> <i>S. pneumoniae</i> <i>L. monocytogenes</i> (age >50) Aerobic GNR (age >50)	1st line: Ceftriaxone 2 g IV q12h + Vancomycin * IV (see nomogram , AUC goal 400-600) + Dexamethasone 10 mg IV q6h		<ul style="list-style-type: none"> Dexamethasone should be administered 10-20 min <u>before</u> antimicrobial therapy for maximal efficacy. Continue for 2-4 days for pneumococcal meningitis
If immunosuppressed, pregnant or >50 yo, add coverage for Listeria	Add Ampicillin * 2 g IV q4h to the above regimen		<ul style="list-style-type: none"> Avoid piperacillin-tazobactam due to poor CNS penetration
If encephalopathic with suspicion for HSV	Add Acyclovir * 10 mg/kg IV q8h		<ul style="list-style-type: none"> Use adjusted body weight for obese patients to calculate acyclovir dose: Adjusted body weight = 0.4(Actual Weight – Ideal Weight) + Ideal Weight
If allergies to 1st line therapy:	<u>Non-life threatening penicillin or cephalosporin allergy:</u> Substitute meropenem * 2 g IV q8h for ceftriaxone (meropenem will cover listeria in patients >50 yo) Substitute TMP-SMX * 5 mg/kg IV q8h for ampicillin if Listeria coverage when immunosuppressed or >50 yo. TMP-SMX may not be indicated in pregnancy. Consult ID for recommendations	<i>N. meningitidis</i> 7 days <i>H. influenzae</i> 7 days <i>S. pneumoniae</i> 10-14 days Aerobic GNRs 21 days <i>L. monocytogenes</i> ≥21 days	<ul style="list-style-type: none"> Adjust vancomycin, meropenem, acyclovir, TMP-SMX and aztreonam in patients with renal dysfunction
Life threatening penicillin allergy:	Substitute aztreonam * 2 g IV q6h for ceftriaxone		<ul style="list-style-type: none"> CT prior to lumbar puncture if: <ul style="list-style-type: none"> Immunocompromised History of CNS disease (mass lesion, stroke) New onset seizures Papilledema Abnormal level of consciousness Focal neurologic deficit

Patient Population & Common Pathogens	Empiric Treatment Regimen	Duration of Therapy	Comments & Reference
Basilar skull fracture <i>S. pneumoniae</i> <i>H. influenzae</i> Group A strep	<u>1st line:</u> Ceftriaxone 2 g q12h + Vancomycin * IV (see nomogram , AUC goal 400-600) <u>If non-life threatening penicillin or cephalosporin allergy:</u> Substitute meropenem * 2 g IV q8h for ceftriaxone (meropenem will cover Listeria in patients >50 yo) <u>If life threatening penicillin allergy:</u> Substitute aztreonam * 2 g IV q6h for ceftriaxone		<ul style="list-style-type: none"> Patients with significant barrier disruption are at increased risk resistant-gram negative organisms thus requiring broadening of ceftriaxone to cefepime CSF shunt infections: Gold standard for infection clearance is removal of shunt. Prior to replacement of shunt, cultures should be negative for: <ul style="list-style-type: none"> CoNS + normal CSF findings: 3 days CoNS + abnormal CSF findings: 7 days <i>S. aureus</i>: 10 days Gram negative bacilli: 10-14 days (plus)
Penetrating trauma <i>S. aureus</i> Coag-negative <i>Staphylococci</i> Aerobic gram-negative bacilli (e.g., <i>Pseudomonas</i>)	<u>1st line:</u> Vancomycin * IV (see nomogram , AUC goal 400-600) + Cefepime * 2 g IV q8h <u>If non-life threatening penicillin or cephalosporin allergy:</u> Substitute meropenem * 2 g IV q8h for cefepime <u>If life threatening penicillin allergy:</u> Substitute aztreonam * 2 g IV q6h for cefepime	At least 7-21 days	<ul style="list-style-type: none"> Adjust cefepime vancomycin, meropenem, and aztreonam in patients with renal dysfunction CT prior to lumbar puncture if: <ul style="list-style-type: none"> Immunocompromised History of CNS disease (mass lesion, stroke) New onset seizures Papilledema Abnormal level of consciousness Focal neurologic deficit
Post neurosurgery Aerobic gram-negative bacilli (e.g., <i>Pseudomonas</i>) <i>S. aureus</i> Coag-negative <i>Staphylococci</i>	<u>1st line:</u> Vancomycin * IV (see nomogram , AUC goal 400-600) + Cefepime * 2 g IV q8h <u>If non-life threatening penicillin or cephalosporin allergy:</u> Substitute meropenem * 2 g IV q8h for cefepime <u>If life threatening penicillin allergy:</u> Substitute aztreonam * 2 g IV q6h for cefepime		<ul style="list-style-type: none"> Adjust cefepime vancomycin, meropenem, and aztreonam in patients with renal dysfunction CT prior to lumbar puncture if: <ul style="list-style-type: none"> Immunocompromised History of CNS disease (mass lesion, stroke) New onset seizures Papilledema Abnormal level of consciousness Focal neurologic deficit
Presence of CSF shunt Aerobic gram-negative bacilli (e.g., <i>Pseudomonas</i>) <i>S. aureus</i> Coag-negative <i>Staphylococci</i> <i>Propionibacterium acnes</i>	<u>1st line:</u> Vancomycin * IV (see nomogram , AUC goal 400-600) + Cefepime * 2 g IV q8h <u>Non-life threatening penicillin or cephalosporin allergy:</u> Substitute meropenem * 2 g IV q8h for cefepime <u>Life threatening penicillin allergy:</u> Substitute aztreonam * 2 g IV q6h for cefepime		<ul style="list-style-type: none"> Adjust cefepime vancomycin, meropenem, and aztreonam in patients with renal dysfunction CT prior to lumbar puncture if: <ul style="list-style-type: none"> Immunocompromised History of CNS disease (mass lesion, stroke) New onset seizures Papilledema Abnormal level of consciousness Focal neurologic deficit

Antimicrobial Subcommittee Approval: N/A	Originated: Unknown
P&T Approval: N/A	Last Revised: 03/2021
Revision History: 03/21: Updated vancomycin dosing & hyperlinks	

The recommendations in this guide are meant to serve as treatment guidelines for use at Michigan Medicine facilities. If you are an individual experiencing a medical emergency, call 911 immediately. These guidelines should not replace a provider's professional medical advice based on clinical judgment, or be used in lieu of an Infectious Diseases consultation when necessary. As a result of ongoing research, practice guidelines may from time to time change. The authors of these guidelines have made all attempts to ensure the accuracy based on current information, however, due to ongoing research, users of these guidelines are strongly encouraged to confirm the information contained within them through an independent source
