## Privacy Policy

This privacy policy governs your use of the UMSkinCheck software application (“Application”) on a mobile device that was created by The University of Michigan. The application is designed to help patients perform self-skin examinations for the purpose of identifying suspicious moles or lesions that may be cancer, or growths that may develop into skin cancer.

The application includes information on skin cancer, instructions on how to do a self skin examination, a full skin photographic survey so that you can compare new lesions to previous photographs, the ability to map lesions and track them with serial photographs over time, and reminders to do the self skin exam and to check on lesions that are being tracked.

What information does UMSkinCheck obtain and how is it used?

User Provided Information- The application stores photographs that you take of your skin and of any suspicious lesions. Initially the app will ask you to take a full-body photographic survey of your skin using 23 photographs. These are then stored within the application (password-protected) so that they can be referred to in the future. The application also stores user-entered data on newly discovered lesions, including the date of discovery, the answers to several questions regarding the lesion, and a photograph of the lesion. This allows for serial monitoring of the lesion. There is no automatically collected data and this application does not collect precise information about the location of your mobile device.

Changes

This Privacy Policy may be updated from time to time for any reason. We will notify you of any changes to our Privacy Policy by posting the new Privacy Policy here
