117000-H: MEDICAL RAIL (10155-H)

GENERAL

In general, follow the guidelines below when designing and specifying medical rail systems. Unless specifically indicated otherwise, these guidelines are not intended to restrict or replace professional judgment.

The use of medical rails is encouraged at patient headwalls and other locations where accessories are expected to be changed or relocated regularly.

STANDARDS

The product installed at UH was Fairfield. Refer to the Architectural Preferred Manufacturers List current compatible products. Medical rail systems should be specified to meet the needs of UMHHC staff, including Nursing, Maintenance and Respiratory Therapy. Compatibility with existing rails and equipment is necessary.

Typically the medical rail is Owner Furnished (via Capital Equipment) and Contractor Installed. The attachment clips are Owner Furnished and Installed.
