DORIS DUKE CLINICAL SCIENTIST DEVELOPMENT AWARD

Thursday, October 17, 4 – 5 p.m.
Palm er Commons, Board Room Five
RSVP to Debbie Stinolis at stinolis@umich.edu or 734-763-5344

Only 2 percent of U.S. physicians identify research as their main professional activity. The Doris Duke foundation seeks to provide mentored research funding to early career physician-scientist faculty to enable their research independence and encourage further development of M.D. researchers across specialty areas.

Join us for a first-hand conversation with recent winners of this prestigious award.

The Medical Research Program created the Clinical Scientist Development Award to provide mentored research funding to early career physician-scientist faculty to enable their transition to independence.

In 2013 the Medical Research Program awarded 16 grants to investigators researching a variety of topics, including childhood malnutrition, pancreatic cancer and rheumatoid arthritis. The grants awarded were for $486,000 over three years.

Since the beginning of the program in 1998, the foundation has awarded 218 Clinical Scientist Development Awards totaling approximately $94 million.
