FREE THROAT CANCER SCREENING IN CONJUNCTION WITH WORLD VOICE DAY

Can you live without your voice?
What about your jaw?
Would you miss it if you couldn't swallow food?

Throat cancer can take all of those things away, along with your ability to eat, talk and breathe normally. These debilitating problems can be prevented, but you have to catch cancer early.

The exam takes less than 45 minutes. Counseling will be available by appointment for people who want to quit smoking.

Refreshments and further information about throat cancer will be provided. Free transportation or parking is available.

You may be at risk for throat cancer if you:

- Smoke or chew tobacco;
- Have a sore throat or hoarseness that won't go away; or
- Have trouble swallowing food.

Get checked now.

This event is sponsored by the U-M Department of Otolaryngology and the U-M Comprehensive Cancer Center.
