When you are done with the anesthesia system:

1.) Rotate the isoflurane dial to OFF
2.) Turn off the Pump
3.) Turn off the IVIS Flow (flip knob down)
4.) Turn on the Chamber (flip knob up)
5.) Leave on the oxygen (shown in this image to be OFF)
6.) Leave induction box lid closed but unclamped

This series of steps will decrease pressure in the system. Thank you for your cooperation.
