

Instructions for Use of Hytrin® (Terazosin)

What is Hytrin

Hytrin® is in a group of drugs called alpha-adrenergic blockers. Hytrin makes it easier to urinate by relaxing the muscles in the prostate and bladder neck. It is also used to treat high blood pressure.

How will I take Hytrin?

Before you take Hytrin, be sure to tell your doctor if you are taking any blood pressure or cardiac medications. You will receive Hytrin as a 1 mg capsule. It is usually taken in increasing doses as prescribed by your doctor. Please read the instructions below on how to take Hytrin. Start taking Hytrin at Dose Level 1. If there is no improvement in your urinary symptoms after 7 days, you should increase medication to the next dose level. If urinary symptoms are acceptable to you, then continue taking the medication at that dose level until your next appointment.

Dose Level 1: Take one 1 mg capsule at bedtime for 7 days. If no improvement after 7 days, go to Dose Level 2.

Dose Level 2: Take two 1mg capsules at bedtime for 7 days. If no improvement after 7 days, go to Dose Level 3

Dose Level 3: Take four 1 mg capsules at bedtime for 7 days. If no improvement after 7 days, go to Dose Level 4.

Dose Level 4: Take six 1 mg capsules at bedtime for 7 days. If no improvement after 7 days, go to Dose Level 5.

Dose Level 5: Contact your doctor for a higher strength capsule and to get further dosing instructions. In general, the target dose is 10 mg at bedtime.

What are the side effects of Hytrin?

The most common side-effect is feeling lightheaded or dizzy. If you experience these symptoms, go back to the previous dose level and take the medication at that dose level until your next appointment. If these symptoms continue even after going back to the previous dose, call your doctor. Other side effects could include headache, tiredness, shortness of breath, abnormal vision, irregular heartbeat, and rash or hives. This is not a complete list of the side effects. However, if you experience any of these symptoms stop taking the medication and call your doctor.

If you experience any side effects that affect your ability to function normally, stop the medication and call your doctor.

What are some precautions I should use while taking Hytrin?

- Get up slowly when moving from a sitting or lying down position, especially after increasing to a higher dose level.
- Be careful when exercising and standing for long periods of time. If you begin to feel dizzy or faint, sit or lie down.
- Do not drive or do dangerous work if this medicine makes you dizzy or sleepy.
- If you miss a dose, take the missed dose as soon as you remember it. However, if it is close to the next dose, do not take the missed dose. Do not take a double dose

Contact Information

If you have any questions about this medication, please contact the University of Michigan, Department of Urology at 734-936-7030 during business hours (8:00 am - 5:00 pm). If there are any concerns that need to be addressed after business hours and on weekends, please call 734-936-6267 and ask to speak with the Urology Resident on Call. If you need to see a doctor right away please go to the nearest Emergency Room (ER). Have the ER doctor contact the University of Michigan urology resident on call for assistance.
