

Community Benefit and Community Health Needs Assessment

Community Benefit (CB) and Community Health Needs Assessment (CHNA) are requirements of the IRS for every non-profit hospital to maintain its tax-exempt status. Michigan Medicine utilizes the CB requirement to serve the community through programs, services, and events that help improve the health, safety and wellness of those within the State of Michigan.

Also, the CHNA requirement is fulfilled through collaborations with community partners to identify the top health needs impacting our service area, and to support community programs, partnerships and investments like our CHS grants program that address these needs. The activities and accomplishments summarized below are one step towards building sustained community health improvement and furthering our vision of caring for Michigan and the world.

\$1.98 Million
distributed to 19 CHS grant projects to promote health equity in the community.

CHS Grants Program
