

Temporary Family & Visitor Restrictions

Michigan Medicine is clarifying our new visitor restrictions, effective Thursday, March 26, 2020, as part of our commitment to protect our patients and employees from the spread of diseases. These important, temporary changes will help us minimize the number of people in the hospital and keep risk of infection low.

All routine visiting is temporarily suspended to protect our staff, patients, and community during the outbreak of COVID-19.

Extremely limited exceptions will be applied in certain circumstances which could include:

Pediatric inpatients	One adult primary caregiver for neonatal and pediatric patients. For prolonged admissions, adult primary caregivers can switch out at one week intervals to facilitate appropriate support throughout the patient's hospitalization.
Adult developmentally delayed inpatients	Patients with developmental delays may have one visitor (where this one visitor provides safety and is key to the patient's care).
Adult and pediatric inpatients at end of life	Up to two visitors at a time for patients at end of life.
Adult and pediatric inpatients at discharge	One visitor who requires home caregiver training in anticipation of inpatient discharge. One visitor to accompany patients for hospital discharge, on the day of discharge.
Labor and delivery	One coach or partner for a patient on the labor and delivery or postpartum unit.
Outpatient Surgery and Procedures	One visitor is allowed to accompany each patient to a procedure or same-day surgery. Pediatric ambulatory patients may have 1 additional visitor, who will then leave UMHS as soon as possible after the procedure/surgery is completed, if necessary to ensure post sedation/anesthesia safety during transit back to the patient's home.
Outpatient Clinics	One visitor is allowed to accompany each patient to an appointment, unless an additional aide or assistant is required.

All Visitors will be screened upon arrival and must not have any symptoms of illness.
